Manage Ricoh peripherals with HP Web Jetadmin

If you are like most companies, you probably have printers and copiers from a number of manufacturers in place, and are working particularly hard to manage these printing/copying devices. Proprietary device management tools exist, but managing diverse environments typically adds complexity and cost to the management equation. HP addresses this need by offering non-proprietary device management software.

HP is partnering with a broad range of device manufacturers to develop and certify vendor and device-specific plug-ins that take the worry out of managing heterogeneous printers and copiers. These plug-ins work with HP's Web Jetadmin 7.2, HP's simple, Web-based peripheral management tool for remotely installing, configuring and managing a wide variety of HP and non-HP network peripherals.

You can now download third-party plug-ins individually, or for exceptional convenience you can subscribe to receive all non-HP plug-ins as a software bundle for a nominal yearly fee. What this means for you is that now you can use a single peripheral management tool to manage devices from multiple vendors. Administrators will save time and effort managing devices in a multi-vendor environment... and they will only need to learn a single software user interface.

Ricoh plug-ins

Ricoh is releasing Web Jetadmin plug-ins for select Ricoh printers and multi-functional devices, including the Aficio, Lanier, Savin, and Gestetner series devices. Once these Ricoh plug-ins for HP Web Jetadmin 7.2 are installed, IT managers can increase their efficiency substantially. The plug-ins provide full graphical support on select models. Here are the features and functionality supported:

- device discovery: support for pre-configured, DHCP enabled, and IPX configured devices
- device groups: create device groups by floor, department, network segment, etc.
- device configuration: remotely configure Ricoh devices individually or by group
- device capabilities: identify installed accessories and their capabilities, RAM, hard disk space, print and scan speed, etc.
- real-time device status: detect and view paper level support, toner levels, etc.
- device statistics: provides device counter (fax, color, copy, etc.) and network communications statistics and enables the scheduling or immediate exporting of device statistics information to either a CSV or XML file format
- receive detailed information on configuration and device capabilities
- diagnostic information: view diagnostic information about devices on the network
- problem alerts: receive problem alerts via email when a device transitions to a state that requires intervention or service, such as low toner status, out of paper, etc.
- device embedded Web server: ability to access any Ricoh device's embedded Web server

Convenient updating service

The Web Jetadmin plug-ins are available from the device manufacturer. For optimal convenience, however, customers can subscribe to the entire software bundle for a nominal fee, an offering available through HP's Software Depot. Under this plan, you will be able to download the initial bundle of plug-ins from the Web site. For the next 11 months, you will receive monthly emails containing updated bundles of plug-ins. This service enhances your ability to get timely access to the latest and most complete set of plug-ins available.

Benefits

Managers in multi-vendor device environments can easily manage their multi-functional devices through a single Web-based peripheral management software solution. You can manage your entire print environment, and add device support without having to reinstall the base, retest or requalify. HP Web Jetadmin minimizes complexity, cost and training.

- easy to use: This powerful tool uses an intuitive interface based on an industry standard Web browser, eliminating the need to learn new interfaces.
- extensible and scalable: You can now manage all your printing needs from a single software package that offers expandable functionality via optional plug-ins.
- secure: You are assured of simple account administration while supporting optimum levels of security through its support of Secure Socket Layer (SSL), Simple Network Management Protocol (SNMP) v3.0, and NT authentication.
- cost-effective: This versatile capability enables you to save time and money by helping you to proactively solve problems before they impact productivity.

Ricoh devices supported

Web Jetadmin plug-ins are now available for the following Ricoh devices:

Ricoh	Lanier	Savin	Gestetner
Aficio 1022	5622	2522	2212
Aficio 1027	5627	2527	2712
Aficio 1035	5635	2535 2235	3502
Aficio 1045	5645	2545 2245	4502
Aficio AP3800C	2138	SLP38c	DSC38

For more info

Web Jetadmin plug-ins for select Ricoh devices, and all future third party devices can be downloaded from the HP Software Depot at www.software.hp.com
